

ANS QuickStart Professional Services

www.ipanematech.com

The Autonomic Networking System (ANS™) is at the heart of Ipanema's ability to connect application performance to enterprises' business goals. ANS offers tightly coupled features that together bring a unique level of intelligence to the enterprise network in an all-in-one system:

Application Visibility, providing full understanding of application usage and performance over the global network;

QoS & Control, dynamically adjusting traffic control and network resources according to users' activity to match application performance objectives, enforcing critical application SLAs;

WAN Optimization, accelerating application response time, optimizing chatty protocols and providing additional virtual bandwidth by drastically reducing the volume of data transmitted across the network;

Dynamic WAN Selection, picking the best route for application flows in multi-networked branch offices.

ANS QUICKSTART

To achieve business goals, enterprises are undergoing fundamental IT transformations. Cloud computing, server consolidation and desktop virtualization improve IT agility, but at the price of increasing network complexity and negatively impacting business performance.

Ipanema's Autonomic Networking System (ANS™) enables any organization to control and optimize all applications over its global network. By using ANS to implement WAN Governance, your enterprise can perform today while taking control of tomorrow.

QuickStart is a professional service delivered by Ipanema and its certified service partners which offers unique value to enterprises' IT organization. It includes knowledge transfer by a certified and experienced consultant around key topics including planning, deployment, configuration and operations. This service is typically delivered at the initial deployment of an Ipanema system to ensure its successful and optimized implementation.

BENEFITS

Enterprises that use Ipanema **QuickStart** can:

- Get a fast and practical transfer of knowledge adapted to their specific use of the ANS system;
- Accelerate their ANS system configuration phase and shorten the time to get the first reports as well as application traffic control and acceleration;
- Ensure successful and fine-tuned Ipanema deployment;
- Maximize their Return On Investment (ROI) with full benefits from the very beginning.

DESCRIPTION

QuickStart consists of a dedicated consulting engineer that will understand your own use case and suggest an appropriate a system configuration and tuning. She or he will transfer the appropriate knowledge for your IT team to operate and get all the value from your Ipanema system.

Using QuickStart you will get:

- A coherent set of visibility reports to understand your application traffic and performance;
- Application performance objectives corresponding to your business criteria;
- ANS's services working properly across an initial part of your network (generally datacenters and a few branches);
- Recommendations about how to extend and manage your ANS system.

Notes:

- (1) *QuickStart does not replace Ipanema training and certifications*
- (2) *QuickStart does not include installation of appliances*
- (3) *QuickStart does not include modifications in your IT or network environment*
